## Overview of Admicom Planner Installation Packages

The Admicom Planner installation package is designed for a **64-bit** operating system.

If you are installing the software in a **Remote Desktop Services** environment or creating your own installation package, please contact our technical support for detailed instructions: [tuki@tocoman.com](mailto:tuki@tocoman.com).

Before installing Admicom Planner, Windows **.NET Framework 4.6** must be installed on the computer. This feature is enabled via Control Panel > Apps and Features > Advanced options > Programs and Features, using the "Turn Windows features on or off" button. On Windows 10 and later, this is installed by default.

## Admicom Planner Installation

### Start the Software Installation

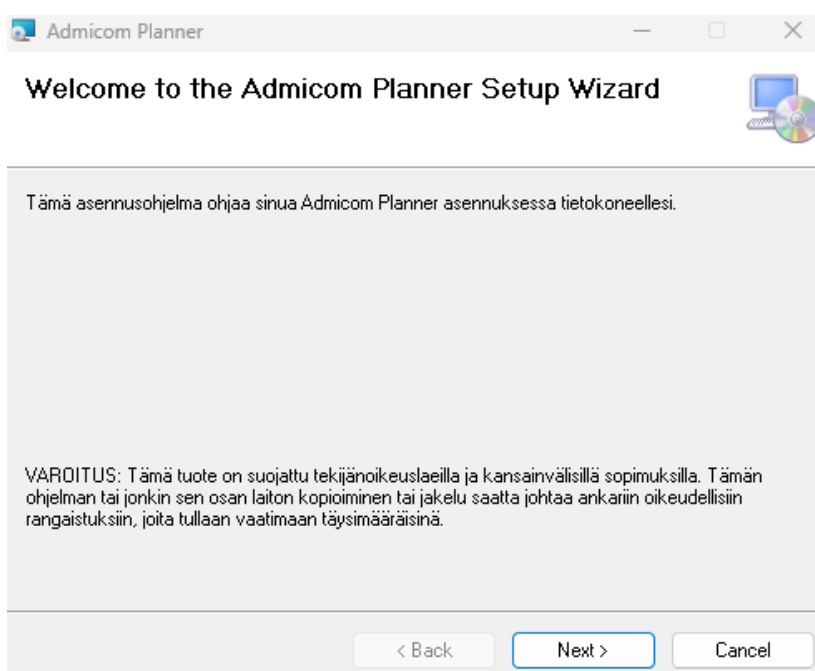

Begin the installation by opening the file *Admicom\_Planner\_3.6.msi*

### Welcome Screen

Read the instructions and click the "Next >" button to continue with the installation.

"This installation wizard will guide you through the installation of Admicom Planner on your computer.

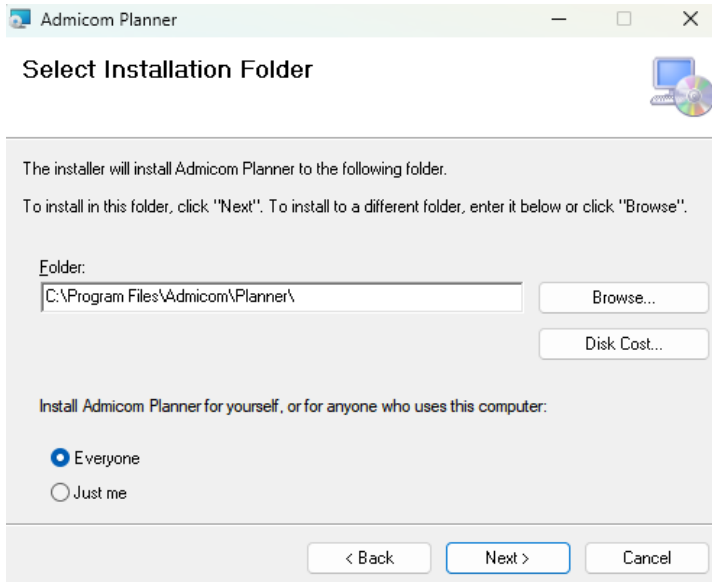

WARNING: This product is protected by copyright laws and international treaties. Unauthorized copying or distribution of this program, or any portion of it, may result in severe legal penalties, which will be pursued to the fullest extent."

## Select Destination Directory

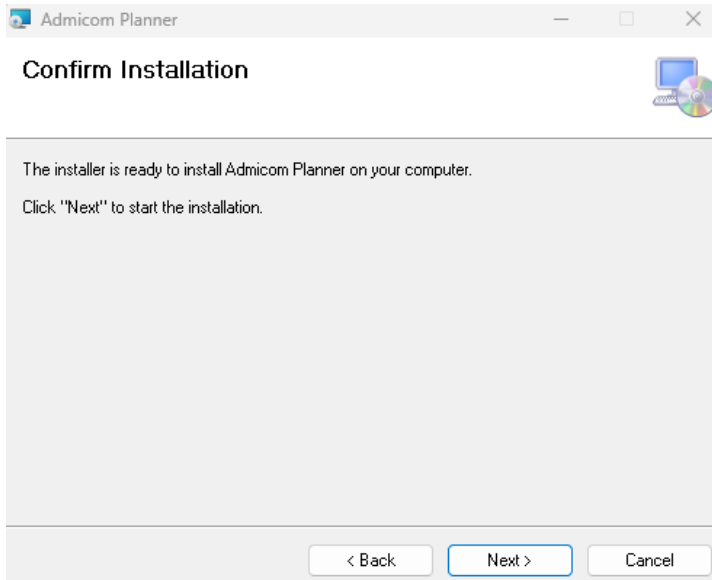

The destination directory is the folder where the program will be installed. You can change the directory using the "**Browse...**" button.

Click "**Next >**" to continue the installation.

## Start Installation

Start the installation by clicking "**Next**".

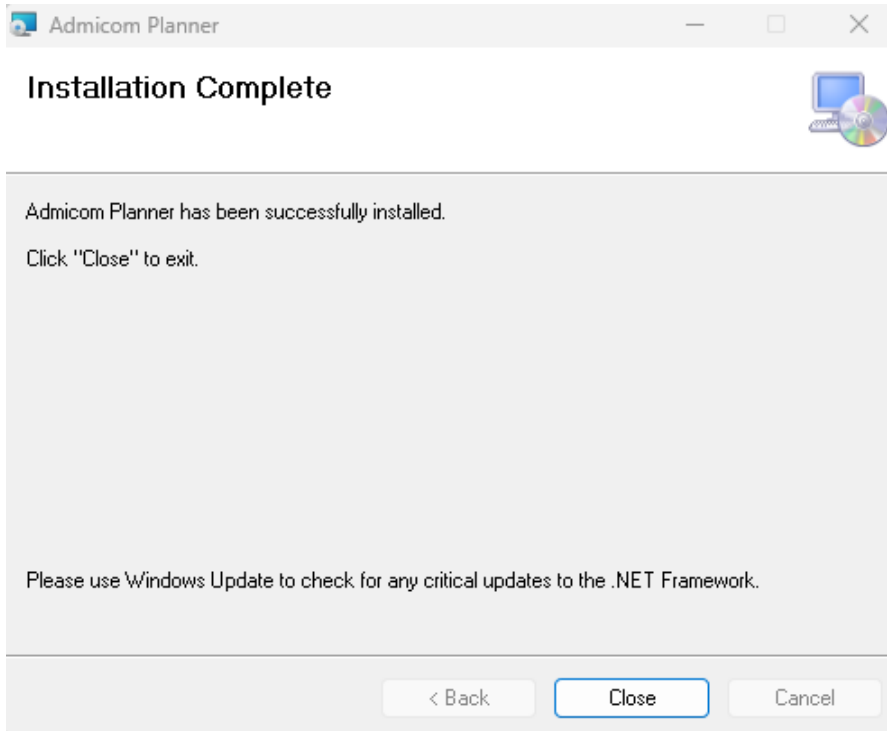

(When User Account Control asks "Do you want to allow this app to make changes to this device?", click "**Yes**")

## Installation Complete

When the files have been installed, the following notification will appear on screen.

Click "**Close**" to finish the installation.

## Admin Installation

### License Information

Admicom Planner 3.6 supports reading license information from the *Local\_Machine* registry. This is particularly useful for Admin installations, so the user does not need to enter license details manually. When the license information is written to the *Local\_Machine* registry, the program is also available when the user does not have a connection to their own user folder. Normally, license information is read from the *cfg* file in the user folder.

Add the license information to the Windows registry in the following location:

*HKEY\_LOCAL\_MACHINE > SOFTWARE > Admicom > Admicom Planner*

Nimi	Laji	Data
 (oletus)	REG_SZ	(arvoa ei ole asetettu)
 Company	REG_SZ	
 SerialNo	REG_SZ	

**Company:** enter the company name as it appears in the license

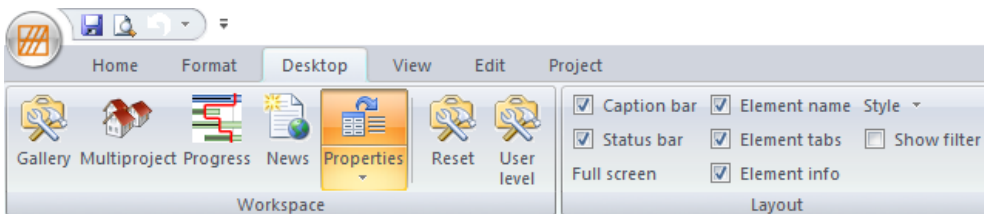

**SerialNo:** enter the license code

## Windows Registry – Current User

The Admicom Planner 3.6 installation package writes default program settings to the Windows registry in the following location when the user launches the program for the first time:

*HKEY\_CURRENT\_USER > Software > Admicom > Admicom Planner*

The program will start without these registry entries, but the user interface will not match the default settings. Verify that the registry entries were installed successfully by launching the program and checking that the following buttons are selected on the **Desktop** tab.

Admicom Planner 3.6 also has a feature where the program reads these settings from the *Settings.bin* file in the root of the program folder, if no Admicom Planner folder exists in the registry.

## RATU Interface

Admicom Planner can use RATU data by downloading the *TocomanAikataulu-RATU.dat* file from the Rakennustietosäätiö website (RATU Net). Two RATU files are available for Admicom Planner: a file containing new construction tasks at a rough level, or a file containing both new construction and renovation tasks at a detailed level. The file in use (i.e., the task register) can be changed, but the desired file must always be saved in the user folder before launching the program.

The file must be saved to the Admicom Planner user folder:

*C:\Users\\Documents\Admicom Planner 3.6*

In an Admin installation (when the installation is done with Admin credentials on the user's computer), save the *TocomanAikataulu-RATU.dat* file to:

*C:\Program Files\Admicom\Admicom Planner\user\_3\_6*

**Note!** This must be done before the user has used the program. When the user starts the program for the first time, the contents of that folder are copied to the user folder.

## PDF Printing

*It is recommended to install Microsoft Print to PDF or, for example, CutePDF (<http://www.cutepdf.com>) on the computer, as these best support Admicom Planner's PDF printing functionality.*

## Known Issues and Limitations

Supported operating systems are Windows 10, Windows 11, Windows Server 2016, and Windows Server 2019.

If you have purchased Microsoft Extended Support for Windows 8.1, Windows Server 2012, or Windows Server 2012 R2, we also provide support for those. We cannot guarantee full functionality for operating systems whose Mainstream Support has ended.

The program runs without a license key as a demo version, which does not allow saving projects.

If you wish to use MS Excel transfers (e.g., infrastructure import from Novapoint/Tekla), please contact our technical support: [tuki@tocoman.com](mailto:tuki@tocoman.com).

## Admicom Support

Contact details for Admicom technical support can be found on our website: <https://www.admicom.com/fi/tuki>
